PROFESSIONAL SUMMARY

Fourth-year Software Engineering student with hands-on experience in backend, mobile, and web development through an internship and a remote developer role. Experienced in REST API development, role-based authorization, database-backed applications, software testing, and resolving production issues using Java, Spring Boot, C#, .NET 8, and Flutter.

TECHNICAL SKILLS

- **Programming Languages:** Java, C#, Dart, C++, C, SQL
- **Backend & APIs:** Spring Boot, .NET 8, ASP.NET Core, REST APIs, JWT
- **Mobile & Frontend:** Flutter, React
- **Databases:** PostgreSQL, MongoDB, MySQL, Flyway
- **Testing:** xUnit, JUnit, Selenium IDE, Jest, Testing Library, Playwright
- **Tools:** Git, GitHub, Postman, IntelliJ IDEA, DBeaver, Microsoft Excel, Chrome DevTools
- **Concepts:** Object-Oriented Programming, Software Architecture, Design Patterns, Software Testing, Database Design, UML, Authentication and Authorization

WORK EXPERIENCE

Mobile and Backend Developer (Remote)

Pixel Yazılım, Konya, Türkiye | June 2026 – October 2026

İçecek Dükkanı: a multi-application ordering, return, deposit, and distribution platform with customer and field-staff mobile apps, a web admin panel, and a central .NET API.

- Diagnosed a notification-targeting defect missed by local and TestFlight testing, tracing it to Firebase Cloud Messaging (FCM) token lifecycle behavior that left stale topic subscriptions on Android devices across app updates.
- Replaced client-declared FCM topic subscriptions with server-controlled device-token targeting and added object-level authorization so staff receive only notifications for orders assigned to them; deployed to production.
- Added multi-device support per staff member using atomic MongoDB token updates, eliminating a race condition where concurrent registrations dropped a device.
- Introduced the project's first xUnit regression test suite covering notification targeting and authorization rules.
- Developed the product return flow across the Flutter mobile app and .NET backend.
- Fixed multi-warehouse duplicate counting in the End-of-Day report and separated cash and virtual POS collections.

Technologies: Flutter, Dart, .NET 8, ASP.NET Core, C#, MongoDB, Firebase Cloud Messaging (FCM HTTP v1), APNs, xUnit, Git, GitHub

Software Development Intern

Yaşar Bilgi Sistem, İzmir, Türkiye | July 2026 – August 2026

- Contributed to a web-based Meeting Room Management System as part of a six-person development team, working on backend and frontend tasks.
- Implemented role-based authorization and permission management, including Flyway migrations for role and permission changes in PostgreSQL.
- Built meeting room reservation workflows, calendar-based availability, and reservation management features.
- Improved dashboard and calendar usability by refining date headers and meeting cards, and added user-specific meeting visibility and consecutive time-slot selection.
- Contributed to Excel-based user onboarding and database-backed user and role management workflows.

Technologies: Java, Spring Boot, React, PostgreSQL, Flyway, Git, GitHub

EDUCATION

Bachelor of Science in Software Engineering

Yaşar University, İzmir, Türkiye | Expected Graduation: 2027

Science High School Diploma

PROJECTS

Senior Project Management and Evaluation System

- Developed a web-based platform with role-based workflows for students, advisors, committees, and administrators.
- Integrated JIRA and GitHub APIs for sprint tracking, issue monitoring, and contribution analysis; implemented JWT and bcrypt authentication and authorization.
- Designed database models and submission and evaluation processes; automated frontend and end-to-end tests with Jest, Testing Library, and Playwright.

Design Pattern-Driven Tea Maker System

- Built a Java desktop application using MVC, State, Decorator, and Observer design patterns, with MySQL-backed consumption data and timer-based state transitions.

MyLibrary – Personal Book Tracking Application

- Built a Java Swing application with authentication, role-based access, CRUD operations, and author-book relationships; designed the MySQL schema and produced UML diagrams and an SRS document.

İzmirim Kart Web Testing Project

- Automated unit and UI tests using JUnit and Selenium, applying Boundary Value Analysis and Equivalence Partitioning to authentication and balance operations.

Bird Observation and Species Management System

- Designed a normalized relational database for species and observations, with multi-entity schema design and SQL queries for reporting and data analysis.

LANGUAGES

Turkish: Native | English: Advanced (C1)

CERTIFICATES

Kariyer Günleri 24 – Dönüşüm

VOLUNTEER EXPERIENCE

İlhamla Engelsiz Yarınlar – Konak Engelsiz Yaşam Köyü

- Participated in social responsibility activities supporting individuals with intellectual disabilities.
